insulated covers and guards

## SAFETY LINK

All Round Supplies' range of safety equipment is specifically tailored to the needs of electrical contractors across Australia. We've taken the hassle out of stocking up on your safety gear by sourcing everything you'll need, right here in this catalogue.

All of our safety products are sourced from the world's most reputable manufacturers and are certified to Australian and NZ standards. With over 15 years in the industry, we also understand the challenges of changing standards, and we pride ourselves on consistently being able to recommend the most up-to-date, utility-approved products.

We take workplace safety very seriously. Take a look through our catalogue and ensure that you and your staff are working with the highest levels of protection at all times.

## WHAT WE OFFER:

- ▶ Huge range of stock in all branch locations.
- ▶ Project-specific packaging & labelling of deliveries.
- ▶ Coordinate deliveries to meet project deadlines.
- ▶ Kitting and ARSsemblies for ease of ordering.
- ▶ Ability to order in non-stocked items on request.
- ▶ Technical expertise and advice.
- ▶ Utility approved products.

# ABOUT US

All Round Supplies is the leading supplier of electrical infrastructure, safety and tooling products in Australia. Established over 15 years ago, we are a one-stop-shop for large and small utility projects, able to supply all required materials in one neat bundle.

With branches in Sydney, Nowra and Newcastle, we have a unique cross-country presence and are proud to have won the respect of both contractors and manufacturers as one of the most knowledgeable and experienced distributors of utility-approved products in the industry.

In 2015, All Round Supplies launched our online store MyShopNGo, for electrical contractors and Level 2 ASPs working in remote areas all across Australia. MyShopNGo offers customers upfront, competitive pricing without the need to hold an account with us.

MyShopNGo provides a huge range of electrical, safety, tooling and hardware products for level 1 and 2 ASPs, registered electrical contractors (REC) and anyone working on a utility or private network.

The focus behind MyShopNGo is to provide customers with great service and quality products at the best prices.

All products are sourced from leading suppliers such as TE Connectivity, Sicame, Balmoral Engineering, PLP, Cabac and Honeywell. MyShopNGo is easy to use, simple to navigate, available 24/7 and offers the most competitive pricing in the market.

# CUSTOM SAFETY KITS

ARS custom safety kits allow you to mix 'n' match our huge range of safety gear to create your own PPE kit. Pick and choose the items you need and fill up one of our heavy-duty kit bags. Custom safety kits are ideal as a starter pack for you or your staff, ensuring that you're fully protected with high quality, up-to-date gear.

# ARC-RATED CLOTHING

All Round Supplies carry the Bisley range of arc-rated work wear, which provides the wearer with premium protection from OHS hazards such as arc flash and arc fires found in high risk work environments.

Bisley work wear is designed with the wearer in mind, balancing maximum protection with maximum comfort, functionality and durability. Each garment is made from innovative Tencate Tecasafe® fabrics, with built-in flame-resistant properties which won't wash or wear out.

## WHAT IS AN ARC FLASH?

An arc flash is the light and heat produced from an electrical arc supplied with sufficient electrical energy to cause substantial damage or harm, fire or injury.

## WHAT IS A HRC RATING?

The Hazard Risk Category (HRC) is the level of arc-rated clothing needed to protect against a specific amount of incident energy (measured in calories per cm<sup>2</sup>).

## WHAT IS AN ATPV RATING?

ATPV (Arc Thermal Protective Value) is a rating of the garment's protection capabilities. The ATPV rating refers to the minimum incident energy that PPE can be exposed to and prevent the onset of a 2nd degree burn. The **HIGHER** the ATPV rating, the more protection a garment gives. The ATPV is expressed in calories per cm<sup>2</sup>.

## WHAT IS ARC-RATED CLOTHING?

Arc-rated clothing is made from flame resistant (FR) fabric, designed to self-extinguish almost immediately upon removal of the ignition source. Normal fabrics will ignite easily, and will continue to burn until they are extinguished or all flammable material is consumed.

## WHAT IS GSM?

GSM (Grams per Square Meter) refers to the fabric weight. The higher the GSM, the thicker and heavier the fabric will be. Shirts and pants with a lighter GSM will be more comfortable for workers in the heat of summer, but also offer less UV and FR protection. Heavier GSM is warmer, heavier and will generally have a higher ATPV rating.

## WHAT IS INHERENT FR FABRIC?

All Bisley arc-rated garments are made with built-in FR properties which won't wash or wear out, and are designed to last the lifetime of the material. There are cheaper, chemically treated fabrics on the market, and it is important to be aware that chemically applied FR properties will wash out after 5 - 6 washes, potentially leaving your employees unprotected.

## WHAT IS THE UPF RATING?

The UPF (Ultraviolet Protection Factor) rating indicates how much UVR will be blocked by the garment. Most fabrics provide some protection from the sun, and generally the thicker and heavier the fabric, the more protection is provided.

## WHAT ARE THE INDUSTRY STANDARDS?

The Energy Networks Association (ENA) NENS09 is a national guideline for PPE. Replacing the previous recommendation of 185gsm cotton clothing, the 2015 update to the NENS09 guideline set the minimum ATPV for base garments as 16.7J/cm<sup>2</sup> (4cal/cm<sup>2</sup>) = HRC 1.

## WHAT'S REQUIRED FOR NSW UTILITIES?

From July 1, 2016, full length arc-rated workwear will be compulsory for all people working on or near Endeavour, Essential or Ausgrid distribution networks, in compliance with the ENA NENS09 guideline.

## QUICK GUIDE

The table below can be used as a quick guide to find the arc-rated garment that's right for your business. Quickly identify the safety ratings, fabric weight and other important features belonging to our range of Bisley arc-rated clothing.

	HRC RATING	ATPV RATING	GSM	UV RATING	HIGH VIS	DAY/NIGHT	WATER RESIST

# ELECTRICIAN'S GLOVES

Our electrician's gloves are manufactured from 100% natural rubber. They are intended to be used exclusively for working with high voltages in potentially dangerous work environments. Each set of gloves is subjected to physical and electrical tests to ensure that they exceed EN 60903 requirements, the standard specification for Industrial Rubber Insulating Gloves.

CERTIFIED TO  
IEC 60903

GRADE GOATSKIN

PURE LATEX GLOVES  
MANUFACTURED UNDER  
● ISO 9001  
ISO 14001

## INNERS & OUTERS

Leather protectors should be worn with rubber insulating gloves to prevent mechanical damage under most circumstances, unless the dexterity required for the task requires that rubber gloves are worn alone.

It is important to note that a leather protector alone does not provide any electrical insulating protection.

## HOW TO MEASURE

Measure your hand by wrapping the tape all the way around your palm at the point shown to the right.

This will equate to the probable size of glove to select. Personal preference for tightness and finger length will ultimately determine the size that you are most comfortable wearing. Allow an extra half inch if cotton inners are to be used.

GLOVE SIZE	HAND CIRCUMFERENCE (IN)	HAND CIRCUMFERENCE (MM)
8	8 INCHES	203MM
9	9 INCHES	229MM
10	10 INCHES	254MM
11	11 INCHES	279MM

GLOVE AIR CHECK TOOL	08719	1 Unit	Each

### GLOVE AIR CHECK TOOL

Use the Balmoral Engineering air check tool to ensure your rubber insulating gloves have no damage or irregularities. Simply slide the glove in one end, roll the cuff up to trap air inside and listen for escaping air, which will indicate a hole or puncture in the glove. In the event of any leakage, deterioration or wear, destroy gloves immediately.

# RESCUE & FIRST AID KITS

Our comprehensive range of rescue kits include an LV switchboard kit designed for the safe rescue of a worker who has suffered an electric shock when working on low voltage electrical apparatus, or a series of pole top and tower rescue kits designed for the rescue of line workers when carrying out work at the pole top.

## LOW VOLTAGE RESCUE KITS

Our low voltage rescue kits contain all of the components required to locate and isolate supply, to retrieve a victim and provide essential first aid.

Our kits come in clearly labelled, high-vis PVC kit bags which are easy to store and transport. The dimensions of the kit bag are 455mm (L) x 290mm (H) x 138mm (W).

Our LV Rescue Kit consists of:

- 1000V insulating gloves
- High-quality LED torch & battery for maximum visibility
- Fire blanket to AS3504
- Isolate Here sign - white with red text
- Low voltage rescue crook (PVC)
- Multi-trauma dressing
- Cardiopulmonary resuscitation card
- Soft PVC/velcro kit bag in orange

## POLE TOP RESCUE KITS

Our pole top rescue kits contain all of the equipment necessary to quickly and efficiently perform a pole top rescue.

Our kits are available in either a yellow, PVC/velcro soft storage bag (385mm x 350mm x 180mm) or in a bright orange hard box (350mm x 340mm x 340mm).

Our pole top rescue kits contain:

- Body belt & pole strap to AS1891-1995
- Manila rescue rope with double action snap hook (25m long x 16mm diameter)
- Knife with sheath
- Cardiopulmonary Resuscitation Card

## Electrician's first aid kit

Description	Code	Buy Unit	Unit of Measure
FIRST AID KIT, ELECTRICIANS RED SOFT BAG	08731	1 Unit	Kit

### ELECTRICIAN'S FIRST AID KIT

The Electrician's First Aid Kit has been made in accordance to the NSW Guide to Electrical Workers' Safety Equipment, and has been built to match the emergency needs of tradesmen and their teams. The robust-design soft case is ideal for keeping onboard your work vehicle or for carrying to an emergency situation. The case measures 400 wide x 350 high x 200mm deep.

# COVERS & GUARDS

## HOME OF THE TIGER TAILS®

**STAMPED & RATED TO  
COMPLY WITH AUSTRALIAN  
AND INTERNATIONAL  
STANDARDS**

### FASTENING OPTIONS FOR COVERS:

VELCRO

STUD

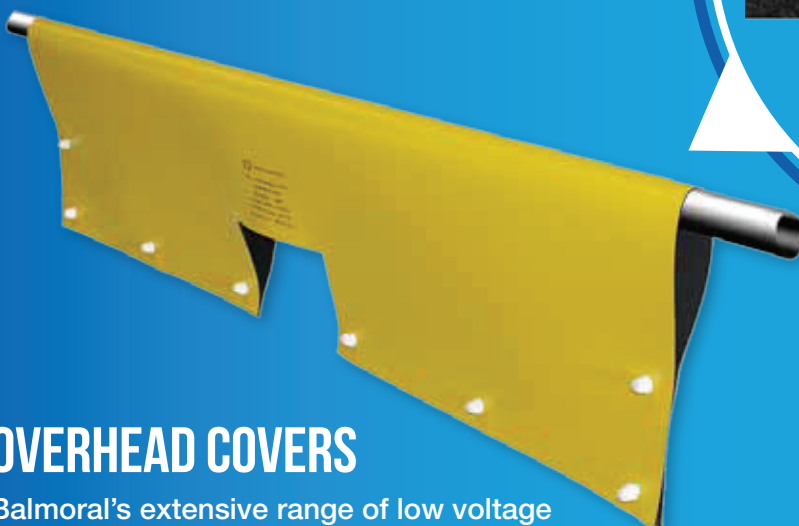

MAGNETIC

## OVERHEAD COVERS

Balmoral's extensive range of low voltage mats and covers provide temporary insulation of potentially 'live' LV electrical components during routine maintenance work.

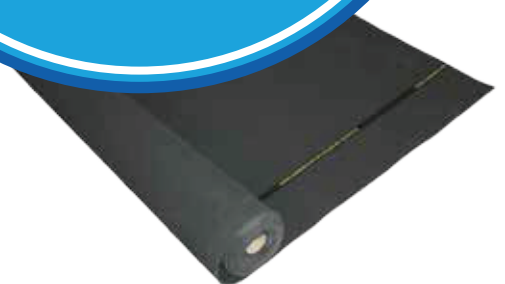

Overhead LV covers and blankets are designed to 'cover over' power lines and mains, cross arms, fuses, links, communication cables, service wires and point of attachments.

## UNDERGROUND MATS

Underground mats are designed to 'screen' substations, switchboards, transformers, pillars and pits.

Non slip and flexible, the covers are weather resistant and meet ENA & electrical safety guidelines in most states and territories.

## Linesman covers

# FALL PROTECTION

Image: www.flickr.com/photos/ausgridphotos

## WHY USE FALL PROTECTION?

Falls from heights are the single biggest cause of death or serious injury in the workplace.

For businesses whose staff and maintenance teams need to work at height quickly and effectively, fall protection is increasingly important.

At All Round Supplies, all of our fall protection equipment is sourced from the most respected manufacturers in the industry, including Balmoral Engineering, Maxisafe and Honeywell.

## THESE 3 CATEGORIES COMBINE TO PROVIDE YOU WITH THE BEST SAFETY

### 1 HARNESS

All Round Supplies stocks a range of harnesses for electrical contractors working at heights.

### 2 CONNECTION

The connection component acts to reduce the force of a sustained fall, when used with a full body harness and suitable anchorage.

### 3 ANCHORAGE

When attached to a suitable anchorage point, the anchorage connector completes the fall arrest system.

## Harness

Description	Code	Buy Unit	Unit of Measure
HARNESS, ELITE 2 LINE WORKER	07242	1 Unit	Each

# BODY PROTECTION

## ARC-RATED FACE SHIELDS

ArcSafe® Elvex ARC shields are proprietary designs, moulded of polycarbonate materials with special absorbers and made to an industry leading 2mm (0.075) thickness for maximum thermal protection.

The shields have an Arc Thermal Protection Rating (ATPV) of 13cal/cm. Arc-rated face shields are now recommended by most utilities in order to provide full-body protection from arc fires.

The shields are designed with an anti-fog coating, and the light green colour provides excellent visible light transmission (VLT).

The arc-rated version can be purchased separately and mounted to various style safety caps, or in a kit consisting of the face shield, visor bracket, hard hat, protective eyewear, T40 bib and drawstring bag.

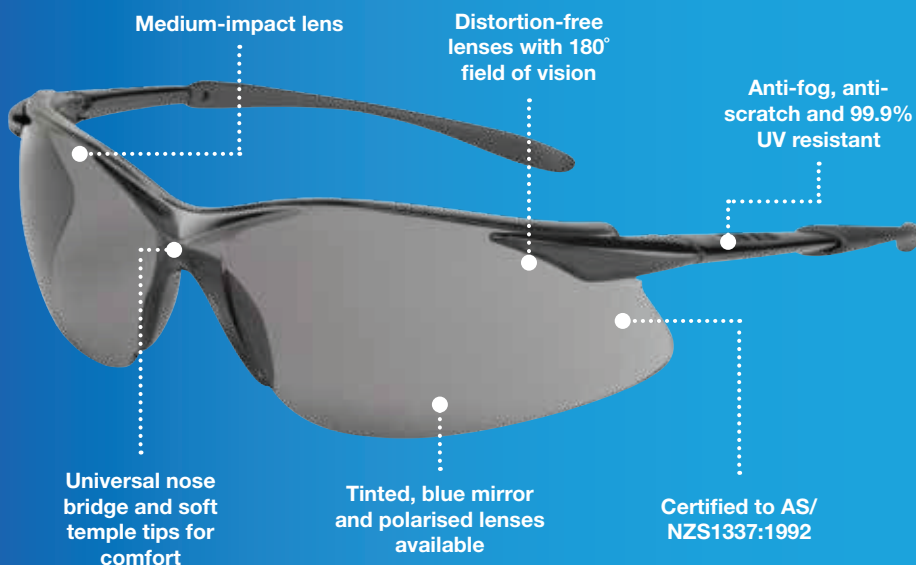

## TYPES OF HEARING PROTECTION

Made from PU foam, earplugs are designed to be compressed and then inserted into the ear canal, where they expand and seal against noise. If used correctly, they often exceed the protection afforded by earmuffs.

Banded earplug - also called semi aurals - are a convenient, easily inserted option for those who are constantly in and out of noise hazardous areas.

## SAFETY GLASSES

Earmuffs suppress unwanted noise by completely covering the outer ear, but the attenuation characteristics of each model need to be studied before choosing.

# GENERAL SAFETY

The electrical contractor's worksite is full of potentially dangerous equipment and scenarios, which is why high-visibility barriers and warning labels are essential to ensure that unavoidable hazards are made as obvious as possible.

All Round Supplies stocks a full range of safety products to meet industry requirements and quality standards, from safety tags, warning labels and tape to traffic cones, bollards, triangle bunting and high-vis mesh. In addition to these site safety essentials, we also supply specialist safety tools like LV bond sets, hot sticks and testers, and general safety gear for all personnel.

## SAFETY VESTS

Keep safe and be seen with hi-vis, reflective safety vests for day and night use. With quality velcro seals and a 'H' pattern of reflective tape, all our vests comply with AS/NZS 4602.

## HOT STICKS

In the electric power distribution industry, a hot stick is an insulated pole, usually made of fiberglass, used by electric utility workers when engaged on live-line working on energized high-voltage electric power lines, to protect them from electric shock.

Depending on the tool attached to the end of the hot stick, it is possible to test for voltage, tighten nuts and bolts, apply tie wires, open and close switches, replace fuses, lay insulating sleeves on wires, and perform various other tasks while not exposing the crew to a large risk of electric shock.

At All Round Supplies, we have more than fifteen years' experience in keeping up with the changing standards of Australian utilities. Our unique set of catalogues reflects the wealth of knowledge we've gained through years of experience in the supply of electrical infrastructure materials.

These industry specific directories simplify the process of identifying and ordering the correct products, whether you're working in a utility, private, mining, industrial, solar or rail project.

Catalogues are available on request by speaking to your account manager or by contacting your nearest branch on 1300 087 579.
