AUSGRID CABLE NOMENCLATURE

WHAT THE CODE LETTERS MEAN:

415V	240	AL3	XQ	CU (NW)	Z	/SAC
Voltage rating	Conductor size (mm2)	Conductor type & no. of cores	Insulation	Neutral or screen wires (if applicable)	Sheath	Other information (if applicable)

BEFORE SLASH /

Phase-to-phase voltage, cross-sectional area (mm2), number of cores, insulating and protecting layers.

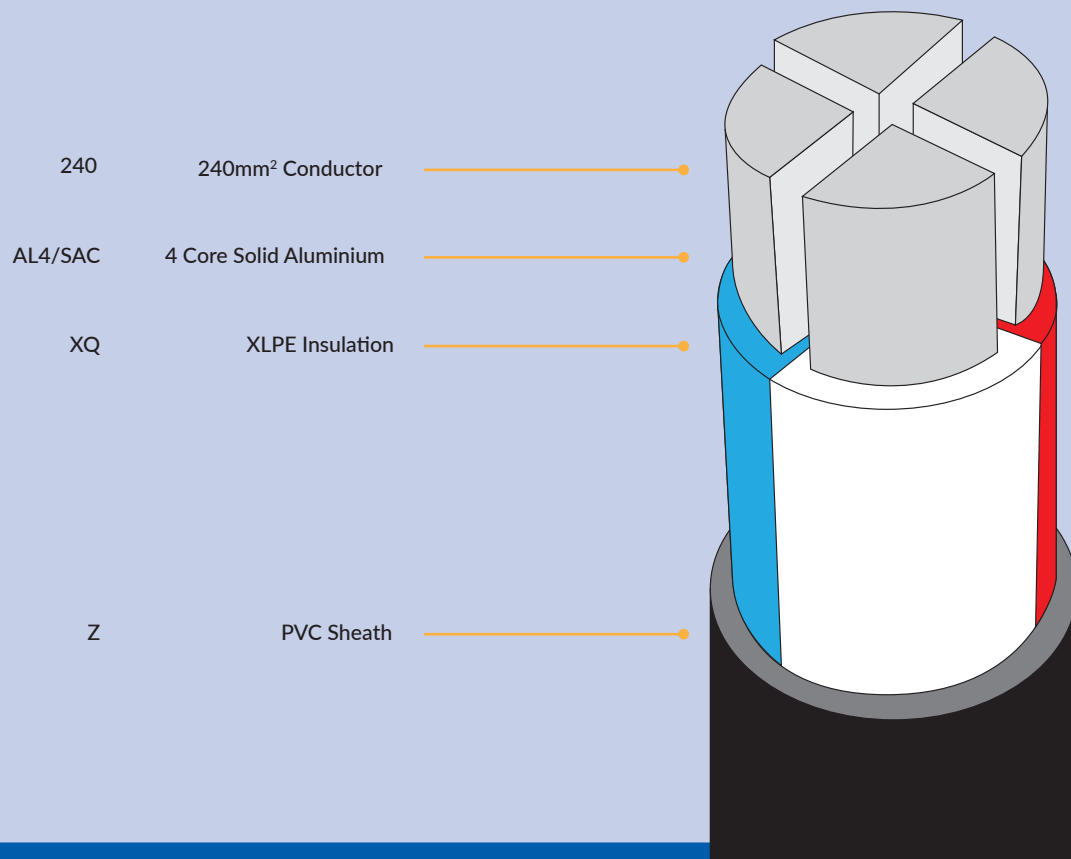

AL	Aluminium
AW	Alumoweld
BR	Butyl Rubber
CDCU	Cadmium Copper
CM	Cambric
CQ	Cellular Polythene
CU	Copper
CW	Copper Weld
DB	Double Brass Tape
DRT	Double Steel Reinforcing Tape
DT	Double Steel Tape Armour
DW	Double Steel Wire Armour
E	Thermo Plastic Elastomer
EPR	Ethylene Propylene Rubber
F	Filled Core
FE	Steel
FO	Fibre Optic Equipped
G	Semiconductive Screen
H	Hochstadter Screen
J	Jute or Hessian Sheath
L	Lead Sheath
MB	Moisture Barrier

MF	Water Swellable Yams Medi-
MQ	um-Density Polyethylene
(N)	Concentric Neutral
(NW)	Wavewound Concentric Neutral
NY	Nylon (Termite Barrier)
P	Paper Insulation
PA	Polyethylene/Aluminium Tape Laminate Sheath
PR	Pair
Q	Polyethylene Insulation
R	Rubber Insulation
SF	Single Fibre-reinforced Plastic Rod Armour
SL	Single Lead Sheath
SS	Stainless Steel Sheath
ST	Single Steel Tape Armour
SW	Single Steel Wire Armour
TR	Tough Rubber Insulation
TRXQ	Tree Retardant Cross-Linked Polyethylene
(TS)	Taped Screen
(WS)	Stranded Wire Screen
XQ	Cross-linked Polyethylene
YQ	High-density Polyethylene
Z	Polyvinyl Chloride (PVC)

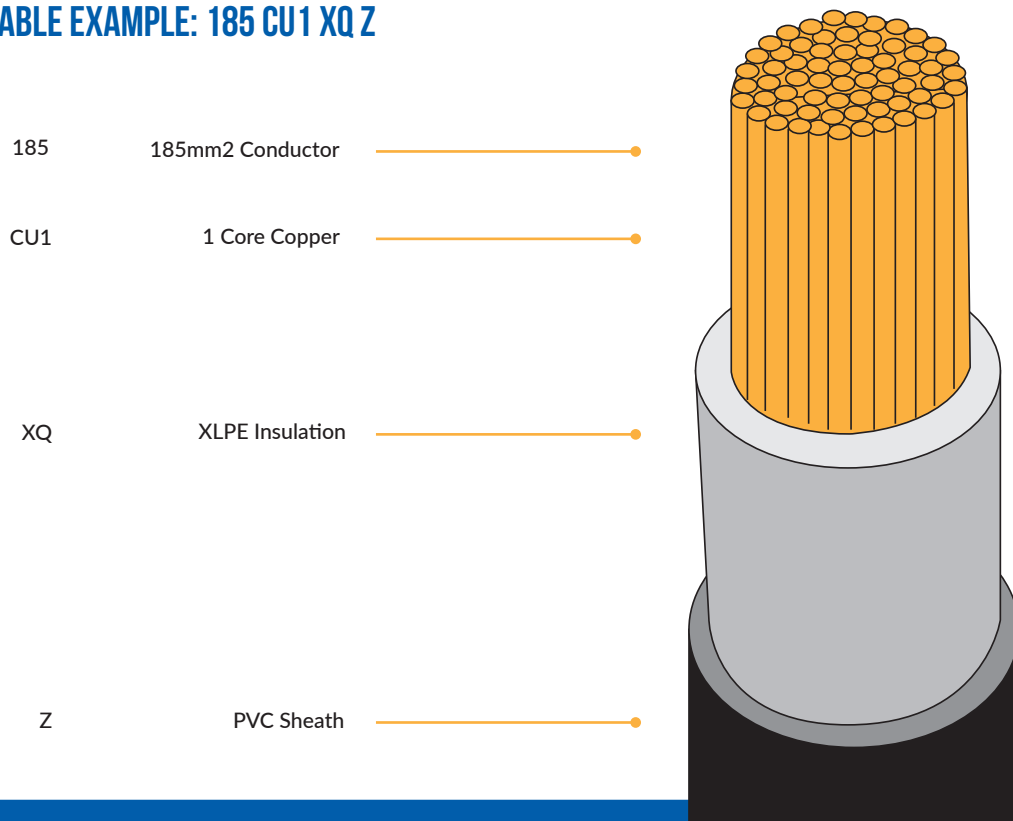

/ AFTER SLASH

SAC	Solid Aluminium Conductor

ELECTRICAL SHORTING AND MOISTURE SEALING CABLES

In accordance with The Ausgrid network standards all power and control cables shall be protected against moisture ingress at all times, including while being laid, regardless of site and/or weather conditions.

Cable ends which are not intended to be worked on immediately after laying must be electrically shorted and sealed against moisture ingress as soon as they are cut. This requirement applies to all cable ends, including cables in pillars and pillar-standards, cables intended to be abandoned or temporarily decommissioned, and cables still on cable drums.

The seals and electrical shorts must not be removed until the cables are ready to be connected. Stripping of the outer

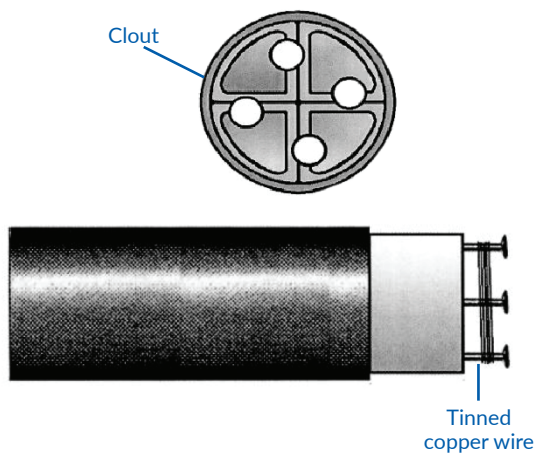

sheathing of LV service cables and connection of any of the cores must not be carried out until connection of supply is required.

Where LV cables/service cables enter a customer's premises, the cable shall be at least single sealed to avoid the risk of water entering the premises via the cable.

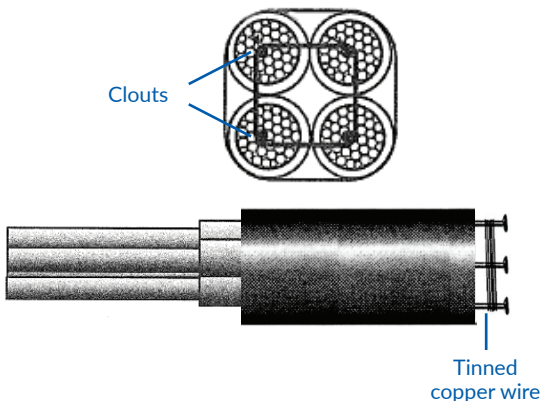

A triple end seal arrangement is required for all HV cables. A triple end seal arrangement is required for all exposed LV Distributor cables. Only a single seal cap is required for LV Distributor cables which are enclosed (e.g. cables left in a LV pillar or inside a kiosk for future connection).

ELECTRICAL SHORTING OF CABLES

4 core solid conductor cables

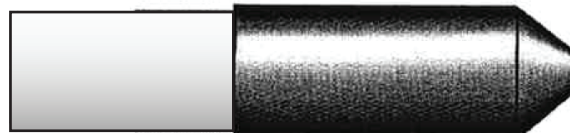

4 x 1 core single cables

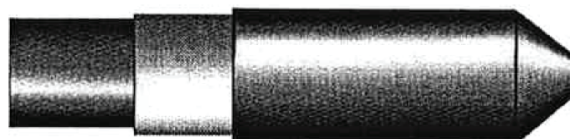

MOISTURE SEALING OF CABLES

Note that cable surfaces which will come into contact with adhesive-lined heatshrink components must be thoroughly cleaned, then degreased and abraded before applying the heatshrink components.

Single end seal

4 core triple end seal*

4 x 1 core triple end seal*

*Triple end seals shall be constructed in accordance with the installation instruction supplied in the triple end seal kit.
